Spinoza Euro Assets Strategy Fund

Fund Fact Sheet • 30 Sep 2024 • NAV: € 183.10 | \$ 203.90

SPINOZA CAPITAL

Investment strategy

The Fund pursues long-term capital appreciation by investing in equities, equity-related securities and derivatives, bonds and other listed securities that are primarily denominated in Euro.

The investment concept is based on Ben Graham's investment philosophy on market fluctuations as set out in 'The Intelligent Investor' adopted through a proprietary, rules based asset allocation model: equity exposure is dynamically increased when markets fall and decreased when markets rise relative to their estimated intrinsic value.

The investment concept is designed to capitalise on the long-term appreciation of equities while taking advantage of short and mid term market overreactions, in fact benefiting precisely from what investors are usually most afraid of: volatility.

The Fund aims to generate attractive risk-adjusted returns relative to major European equity indices.

Fund performance (gross)

Gross fund performance takes into account all costs & fees incurred at fund level but excludes any subscription fees. Further costs may be charged individually at customer level (e.g. custody fees, commissions and other charges), resulting in a diminishing effect on performance. These figures refer to the past. Past performance is no reliable indicator of future performance.

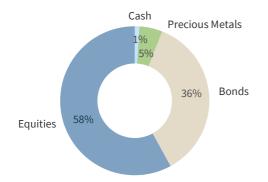

Fund manager's comment: September 2024

- Fourteen months after its last interest rate hike, the US Federal Reserve kickstarted its ratecutting cycle with a 50 basis point move in September. With the US unemployment rate having
 risen from a low of 3.4% in April 2023 to 4.2% today, Fed officials have now made it clear that
 they do not welcome any further weakening in the economy and are keen to get rates back to
 less restrictive levels quickly. With inflation cooling the eurozone inflation rate fell from 2.2%
 in August to 1.8% in September and economic activity remaining relatively subdued, the
 European Central Bank also felt it appropriate to cut interest rates and delivered its second
 25bp cut in September, taking interest rates to 3.5%. Global equity markets were mixed last
 month. While the US market rose in September (e.g. S&P 500 Index +1.1% in EUR terms),
 European equity markets fell slightly last month (e.g. Stoxx 600 Index -0.4%).
- After treading water for much of the quarter, Asia ex-Japan equities performed strongly towards
 the end of September after Chinese policymakers announced a raft of new stimulus measures,
 including interest rate cuts and reduced down payment requirements for home purchases.
 While many of these measures were taken in isolation last year, the coordinated nature of the
 September announcement was the clearest signal yet that Beijing is prepared to prop up the
 Chinese economy and markets, which in turn should support the global economy.
- The Spinoza Euro Assets Strategy Fund gained 1.69% in September. The fund took advantage of falling prices and lower valuations in selected European equity markets to gradually add to its equity positions (e.g. Turkey, whose equity market has fallen by around 20% in EUR terms over the last 3 months). On the other hand, the fund took some profits and reduced its equity positions in European markets where prices and valuations have risen recently. The fund's equity exposure remained stable at 58% in September. In the non-equity portfolio, the fund took advantage of the rise in silver and copper prices to take some profits and moderately reduce its positions. In the bond portfolio (36% of the fund's assets), the fund added to its positions in senior and hybrid bonds of high-quality issuers in the European residential real estate sector in order to lock-in the attractive risk-adjusted yields currently offered by this sector.

Investor Profile

The Fund is suitable for investors seeking long-term capital growth and may not be appropriate for investors who plan to withdraw their money within 5 years.

Risks

Market risk: Market fluctuations and general market or systematic risk is inherent to an entire investment market and as such, to a varying degree, in all of the Fund's investments. Price movements in an investment market can be volatile and are influenced, among other things, by changing market supply and demand, national and international political and economic events.

Concentration risk: To the extent that the Fund's investments are concentrated in a particular country, market, industry or asset class, the Fund may be susceptible to loss due to adverse occurrences affecting that country, market, industry or asset class.

Counterparty risk: There is a risk that a counterparty will not fulfil its payment obligation for a trade, contract or other transaction, on the due date. This may result in losses.

Liquidity risk: The Fund may be exposed to liquidity risk where, due to a lack of marketability, the Fund's investments cannot be bought or sold quickly enough to prevent or minimize a loss.

Derivatives risk: The Fund may use derivatives in an attempt to reduce risk (hedging) or for investment and portfolio management purposes. It may be that the use of derivatives may not always be successful and cause unit prices to fluctuate which may in turn result in loss to the Fund.

Credit risk: The risk of default that may arise if an issuer fails to make payments when due.

Operational risk: The risk of losses caused by employees, delegates, service providers and other third parties through insolvency, errors, fraud or criminal actions.
